ADDITIONAL NOTES:

Ends: The nature of this design requires a lot of slipping stitches to move the design towards the center and/or back out again depending on which variation you choose to knit. Because of this, you could need to sew in a number of ends after the piece is complete. You may, however, choose to sew the ends in as you go. For each MC and CC section, you could break the yarn and then pick it back up again for the next section of that color. As you start each section, you can carry the yarn tail as you knit, in the same manner you would use for colorwork to catch long floats. If you intend to mirror your colors across the width for vatiation A or C, you may want to create small bobbin windings for each color, then leave those windings separated at the end of each section until you need to pick it back up again. This method will give you less ends to weave in after the piece is complete, but will involve some fussiness working the wrap and turn sections so as not to tangle all your threads. I like to use small bags to contain the yarn when not in use. The ends will only be an issue on the right side of the work where you will be picking up new colors. On the left, you will only be working wrap and turn sections and not adding new colors.

Stitch Markers: Stitch markers are identified as either being **R** or **L** depending on if they are positioned to the **R**ight or **L**eft of center when looking at the garment from the front. All are measured from distance to center stitch. If you own colored stitch markers or unique stitch markers, and can choose different ones for each of the markers, it will make finding your location that much faster and allow you to skip some counting. I like to work with mirrored colors knowing that an **M1R** is located at the same distance from center as an **M1L**.

Bind off, sew in ends, and block.

While instruction for knitting Variation D is different from Variation B, both finished knit items will look relatively similar. The way you block each variation will define the location of the straight edge and the position of the central point for the elongated half diamond shape.
